With that said, I'm not saying I hate it, but I feel that Lightroom is not on its evolution path right now. I haven't really used Lightroom in about 3 years and have found Creative Suite Photo & Design Suite to be a solid package that gets the job done and does it fast. However, Photoshop continues to evolve and the current version of Lightroom is a bit of a step backwards. In my opinion, the best thing Adobe could do is consolidate all of the programs (Photoshop, Lightroom, Bridge) into a single program. While there is the option to download Lightroom into Photoshop, I prefer to have them in separate programs. In the past, this has been a problem. Can you imagine trying to use a program like Photoshop as Lightroom? Unfortunately, consolidated Lightroom and Photoshop would require a lot more work and Adobe doesn't seem to have the time or resources to do it right. I think the problem with Lightroom is that it is very focused on its discovery, development and social aspects, and that it allows the user to modify the data rather than take control of it. Lightroom is, to a large extent, a content hosting and management tool that sits on top of the images to can be more easily accessed, shared, downloaded or exported. Photoshop is a far more directed workflow tool in that it focuses on the media elements, the art, editing and design. Lightroom seems to be an all-inclusive photo editing suite; when it becomes too large, I imagine that simplicity will be lost. However, from my reading of comments on this web site, it sounds like Lightroom is not the only photo-editing platform. There are also other products, based on the same code and the same workflow, that cater to individuals who like light, fast, precise tweaking of very small areas. And some of them are fast and light (to say the least) enough to keep up with large-scale photo projects. Unfortunately, I see no likelihood that Lightroom will be extended into a real-time, real-photo-editing platform. It is the Photoshop of the digital world - a very good one, but it looks like it will not become the Photoshop of the photographic world. As such, Lightroom is a fine program in its own right, but it is not something I would use regularly for my work.

Adobe's industrial design division was spun out of Illustrator, giving birth to Adobe InDesign, Photoshop, and Dreamweaver in early-to-mid-1990. Combined, the three apps are the core of the \$10-billion-a-year company. A group of seven people was hired to build Photoshop from the ground up in 1990. The goal was to build a program appealing to the same kind of people who would use Illustrator for graphics and graphic design. Their first program, renamed the Photoshop Image Editor, was released to paying customers on November 8, 1994, as a 16-pound software package. The company hailed it as the first of a "new class of photo-editor products." The original program was built on the same 3.5-inch x 5.5-inch floppy disk as the image files. You couldn't place text on images, which was pretty much equivalent to those programs of the time. Nikon, Canon, and Kodak were among the first companies to embrace the software, and its features and capabilities quickly captured imaginations. At the end of 1994, Adobe sold ImageEditor for \$295, and included a sample of just twenty-four images on three floppy disks. It took an additional 20 floppy disks to load the software. The price, however, was coming down. Soon the price had dropped below \$200. By 1995, the company was selling premium and deluxe versions for \$199 and \$299 respectively with a full set of pictures on CD-ROM. At the time, Photoshop was a \$1,995 application that, for part of its development, was licensed for free to Adobe customers. This was a boon for Visual Arts students and others interested in "soft-skills" training.
